CSWC Operational Period Summary

0600 August 11 2018 to 1800 August 11 2018

A US Forest Service pack string of mules from the U.S. Forest Service-Stanislaus National Forest helps supply and support the remote fire Spike Camps. While pack stock use boasts a long history within the Forest Service, it is becoming a vanishing skill. Today, the Region 5 (California) program includes only approximately 120 animals and seven permanent packers.

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

*** High Risk Sacramento Valley and Surrounding Foothills Today for Shifting winds and W-NW-N Gusts to 35 mph with Low RH ***

*** High Risk Far Eastside and Eastern Portion of NE CA Today for SW-W Gusts to 35 mph and Low RH ***

An area of deep low pressure will move from the eastern Pacific across the Pacific NW on its way to SW Canada today. A trailing dry cold front will slowly move through Northern California this afternoon through the overnight hours. Winds will increase again today across much of the area. W-NW gusts to 25 mph and locally higher will develop in the coastal range this afternoon. These winds will accelerate through the gaps and passes into the western Sacramento Valley late this afternoon through this evening, with peak gusts to 30-35 mph. NW-NE gusts to 30-35 mph are also expected in the Sacramento River canyon between Mt. Shasta and Lake Shasta this evening until early Sunday. The Far Eastside and Modoc County portion of the NE CA PSAs can expect SW-W gusts to 30-35 mph for several hours this afternoon as well. Minimum RH east of the Cascade-Sierra crest will be 5-15% and inland areas west of the crest will see RH drop to 8-18% in the driest spots. Winds will be lighter on Sunday, with peak afternoon gusts in most areas 25 mph or below. A drier NE wind will also affect the upper slopes and ridges in the North Coast PSA.

Moisture from former Hurricane John will gradually spread northward into the region late this weekend and early next week. Isolated thunderstorms will remain south of the Lake Tahoe region this weekend, but possibly spread farther north on Monday in western NV. Thunderstorm chances will increase in the SE portion of the region on Tuesday, and at this time Wednesday appears to be the most likely day for thunderstorms in the North Ops area, focusing on northern and eastern areas. Models are still not consistent on the thunderstorm amounts or locations, but they do show a trend back to hot and dry weather late next week.

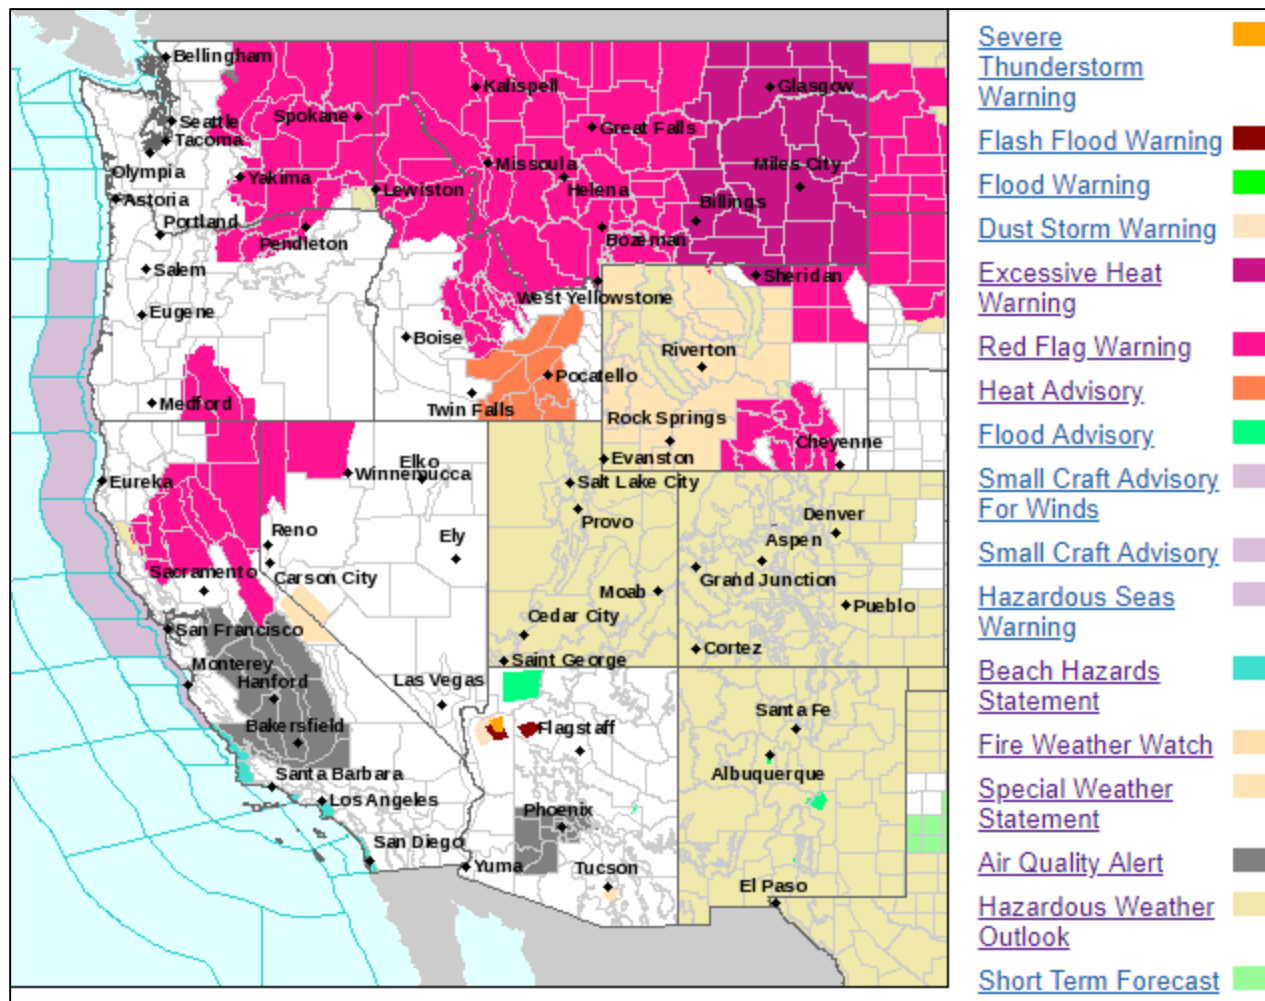

SOUTHERN CALIFORNIA

Isolated wet thunderstorms over portions of Southern California

Sea breeze expected each afternoon through early next week

A humid airmass continues to linger across Southern California which will result in a few late afternoon and evening thunderstorms. The atmosphere is quite stable, so storms should be late in developing and will be few in number overall. Most of the storms will occur near the Sierra Crest south of Fresno County and across the San Bernardino and Cleveland National Forest. Expect cooler weather to overspread the region the next few days due to a return of the sea breeze. Highs, while much cooler than earlier in the week, will still be a few degrees above normal due to very warm sea surface temperatures. Expect readings in the 70s to lower 80s in the mountains to the 90s in the valleys and lower foothills. West winds of 20-30 mph will be possible in the Kern County Mountains, Antelope Valley and the Banning Pass as well as other areas prone to sea breeze conditions. Tuesday may be the coolest day of the outlook period as mid and high clouds from former Hurricane John pass by. Wednesday appears to be the transition day as another ridge builds over the area during the second half of next week. Expect warmer weather to return by next Thursday with valley highs back over 100. Thunderstorm chances will likely be limited to the Sierra Crest Monday through Wednesday, but look for a significant uptick in convection toward next weekend. Winds will be light after next Tuesday.
